# FERMOB: MATERIALS AND TREATMENT FOR OUTSIDE

For its furniture, Fermob chooses to use metal – the "ideas material", as Gustave Eiffel put it, won over by its incredible versatility. The metals we use are top-grade steel and aluminium. Fermob furniture can be either exclusively metal or a combination of metal and OTF (Outdoor Technical Fabric, a type of PVC-coated polyester).

Fermob furniture undergoes several stages of rust-proofing followed by two paint stages. These treatments are applied at one of the best-performing plants in Europe as part of a process exclusive to Fermob. Two treatments are proposed: the first is the 13-step High Protection Index 13 treatment. This produces excellent results for aluminium, but the results for steel can be further improved with the Very High Protection Index 22 treatment – a 22-stage process, involving the use of 18 treatment baths, which provides optimum protection for steel furniture that is constantly exposed to very wet, humid or salty conditions.

The paint used is a DuPont® 100% polyester, anti-UV powder paint, which is applied electrostatically to the furniture for optimal coverage, and then baked at very high temperature – the same process used in the motor industry.

## FERMOB GUARANTEE

All Fermob furniture protected with the Very High Protection Treatment is guaranteed for 3 years against corrosion and other forms of visible deterioration. The Very High Protection Treatment is applied as standard to all of our high-end products. It can, however, be applied to any product in the range upon specific request and subject to conditions.

All Fermob furniture protected with the High Protection Treatment is guaranteed for 1 year against corrosion and other forms of visible deterioration.

### The Fermob guarantee does not cover the following:

- Any damage arising from insufficient care, or from non-compliance with the supplied instructions and advice for receiving, assembling, using, maintaining and storing Fermob furniture.
- General wear and tear or natural fading of the materials used.
- Rust originating from scratches or abrasions that result from general wear and tear, and which can not be removed via standard cleaning and maintenance processes.
- The corrosion of stainless steel parts due to use in a confined, chlorinated environment.
- Any changes in the visual appearance of wood that are directly linked to ageing.  
As wood is a living material, the appearance of its surface evolves naturally over time.

The guarantee will be honoured only upon presentation of the invoice for the purchase of the product concerned.

**More information on the Fermob guarantee and furniture maintenance recommendations can be found at [www.fermob.com](http://www.fermob.com)**

# FURNITURE THAT MAKES ITS MARK ON PEOPLE'S MINDS, NOT ON NATURE

Fermob furniture is designed for natural environments and is made using materials and processes that respect the environment.

## **Metal: an environmentally friendly choice**

98% of all iron and aluminium is now recycled worldwide. This means that Fermob can guarantee that its furniture is not only recyclable, but – more importantly – actually recycled!

## **Ecological paint protects both the environment and your health**

The powder paints used by Fermob contain no solvents. They are 100% recycled and recyclable. They are applied in a zero-waste facility.

## **Recycled fabrics**

To procure its Outdoor Technical Fabrics (OTFs), Fermob selects only the most rigorous suppliers in terms of sustainable development. Ferrari, the main OTF supplier, has committed itself to a unique, patented recycling process, Taxyloop® which guarantees that 100% of the fabric constituents are recycled.

This approach means that:

- OTF offcuts are salvaged and recycled
- Fabrics are recycled when they reach the end of their lifespan

## **Recycled and recyclable packaging**

Fermob has been participating in the Eco-Emballages ("Eco-Packaging") scheme for many years now.

## **Reducing impact on the environment as continuous improvement**

Optimising energy consumption remains one of Fermob's key concerns, as regularly demonstrated through concrete action such as lowering paint-oven temperature by 10°C or the forthcoming implementation of a stoving process that consumes 30% less energy.

## **Eco-designed furniture**

The design and aesthetic qualities of Fermob creations, together with their lightness and resistance, are also solutions to key environmental challenges: saving materials and limiting waste.

### **Intentions backed up with actions**

Fermob was one of the first companies in the furniture sector to introduce a collective waste sorting system, which has now been in place for 8 years.

Fermob is currently in the process of **ISO 14001\*** certification. The certification of the 2nd stage was obtained in October 2009 (this certification process comprises a total of 3 stages).

\*The ISO 14001 standard concerns the implementation of adaptable environmental management systems.
